Product overview

The HP 830 Unified Wired-WLAN Switch Series integrates both wireless controller and 1000 Mb/s Ethernet switch functions. The switch series provides 1000 Mb/s Ethernet ports, with each supporting a maximum of up to 30 W PoE+ power and IEEE 802.11a/b/g/n APs while delivering unified wired and wireless access control functions.

The HP 830 24-Port PoE+ Unified Wired-WLAN Switch provides two 10GbE slots on the rear panel to relieve transmission bottlenecks at the core of a WLAN network.

This series provides edge-to-core unified access and consistent WLAN services to the small and medium branch offices of enterprises that are deploying the HP 10500/7500 20G Unified Wired-WLAN Module at their central (or main) offices.

The HP 830 Unified Wired-WLAN Switch Series is part of the HP Enterprise Mobility solution.

Overview

Quality of Service (QoS)

- **IEEE 802.1p prioritization**
  delivers data to devices based on the priority and type of traffic

- **Class of Service (CoS)**
  sets the IEEE 802.1p priority tag based on IP address, IP Type of Service (ToS), Layer 3 protocol, TCP/UDP port number, source port, and DiffServ

Security

- **Web-based authentication**
  provides a browser-based environment to authenticate clients that do not support the IEEE 802.1X supplicant

- **IEEE 802.1X and RADIUS network logins**
  supports port-based and SSID-based 802.1X authentication and accounting

- **WEP, WPA2, or WPA encryption**
  can be deployed at the AP to lock out unauthorized wireless access by authenticating users prior to granting network access; robust Advanced Encryption Standard (AES) or Temporal Key Integrity Protocol (TKIP) encryption secures the data integrity of wireless traffic

- **Integrated intrusion detection system (IDS) support**
  provides support for hybrid and dedicated modes; detects flood, spoofing, and weak IV attacks; displays statistics (events) and history; supports configuration of detection policies

- **Media access control (MAC) authentication**
  provides simple authentication based on a user’s MAC address; supports local or RADIUS-based authentication

- **Secure user isolation**
  virtual AP services enable the network administrator to provide specific services for different user groups, allowing effective resource sharing, and simplifying network maintenance and management

- **Secure access by location**
  AP location-based user access control helps ensure that wireless users can access and authenticate only to preselected APs, enabling system administrators to control the locations where a wireless user can access the network

- **Endpoint Admission Defense**
  integrated wired and wireless Endpoint Admission Defense (EAD) helps ensure that only wireless clients who comply with mandated enterprise security policies can access the network, reducing threat levels caused by infected wireless clients and improving the overall security of the wireless network

- **Public Key Infrastructure (PKI)**
  is used to control access

- **Authentication, authorization, and accounting (AAA)**
  uses an embedded authentication server or external AAA server for local users

Connectivity

- **IEEE 802.3at Power over Ethernet (PoE+)**
  - up to 30 W per port supports PoE+-capable devices such as IP phones, wireless access points, and security cameras, as well as any IEEE 802.3af-compliant end device
  - eliminates the cost of additional electrical cabling that would otherwise be needed in IP phone and WLAN deployments; the HP 830 8-Port PoE+ Unified Wired-WLAN Switch supports up to 5 ports at 30 W; the 24-port model can support up to 24 ports at up to 30 W depending on the power source

- **Loopback**
  supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

- **IPv6**
QuickSpecs

Overview

- **IPv6 host**
  enables controllers to be managed and deployed at the IPv6 network's edge
- **Dual stack (IPv4 and IPv6)**
  transitions customers from IPv4 to IPv6, supporting connectivity for both protocols
- **MLD snooping**
  directs IPv6 multicast traffic to the appropriate interface, preventing traffic flooding
- **IPv6 ACL/QoS**
  supports ACL and QoS for IPv6 network traffic

Performance

- **Flexible forwarding modes**
  supports both distributed and centralized forwarding mode; in a wireless network using centralized forwarding, all wireless traffic is sent to the HP 830 Unified Wired-WLAN Switch for processing; if the distributed mode is configured, authenticated clients can continue to access local resources in the event that connectivity to the HP 830 Unified Wired-WLAN Switch is lost
- **Fast roaming**
  supports Layer 3 roaming and fast roaming, satisfying the most demanding voice service requirements

Scalability

- **Pay as you grow**
  license upgrades allow you to increase support for additional access points without the need to buy additional costly hardware and use additional valuable space in a rack
